IGL COATINGS ECOCOAT KENZO
A COATING SYSTEM FOR HYDRO AND OLEOPHOBIC TREATMENT OF PAINTS (ALKYD, ACRYLIC, POLYURETHANES, EPOXIES).

Description
ecocat Kenzo is a user-friendly VOC-free ceramic coating system for almost all types of paints surfaces. ecocat Kenzo is high solids, micro-marring resistant, long-term gloss retention, outstanding weathering resistance and excellent finish quality coating system. The consumption of the product will depend on the application method, approximately 1-5 ml/m² is sufficient for most applications.

Applications
Treatment of automotive, marine and aviation paints.

Processing
- Do not apply the product at temperature below 5°C (41°F).
- Do not expose the surfaces to be treated to direct sunlight before or during application.
- The surface must not be hot during application.
- Provide adequate ventilation and fresh air during application.
- If the substrate was previously treated with a coating system, proper removal, preferably with a polishing agent is important to ensure that the products bonds with the surface.

Step 1: Cleaning the surface
- The temperature during application should be in the range of 5-50°C (41-104°F), preferably 20-26°C (68-78.8°F).
- In order to permit sufficient chemical bonding of ecocat Kenzo to the substrate, the surfaces must be carefully cleaned of all contaminants before the application. The long-term stability and abrasion resistance of the coating depends on how well ecocat Kenzo has chemically bonded with the surface.
- It is highly recommended to polish the surface with an abrasive system to remove all hard bearing contaminations on the surface.
- The additional use of ecoclean iron is recommended to remove iron particles or fallout.
- Use ecoclean wash to thoroughly remove all remaining residue and leftover film on the surface.
- Dry the surface before degreasing the surface with ecoclean multi or ecoclean precoat. It is recommended to use the IGL Microfiber Cloth for degreasing. The degreasing ensures a completely clean and reactive paint surface.
- Coat the cleaned surface immediately after cleaning to prevent any contamination.

Step 2: Treatment process
- Keep the solution unstimred.
- Place a few drops of ecocat Kenzo Base on the provided application cloth in a vertical direction.
- Apply the product lightly on the surface in a 3x3 feet area, in a vertical (up and down) then horizontal (left and right) motion.
- Always ensure the areas coated are overlapping.
- Wait for about 5-10 minutes (or when there is a small resistance in buffing) then buff off with a clean dry IGL Microfiber Cloth.
TECHNICAL DATA SHEET
IGL Coatings™ Ecocoat Kenzo

Material no. 154303  Revision date 30.05.2019
Version 1.1

- Allow coating to cure for 2 hours (5-50°C or 41-122°F) or 1 hour (60°C or 140°F) then apply ecocoat Kenzo Top with the same procedures and buff off with after 0.5-2 minutes with a clean dry IGL Microfiber Cloth.

**Important Note:** Do not let the film dry sporadically. If it dries within 2 hours, the film can be removed with a small amount of ecocoat Kenzo Top. If it has been allowed to harden for more than 12 hours, it will need to be polished off with an abrasive system and reapplied.

- The hydrophobic effect generally can be seen depending on the substrate, reactivity and temperature after its initial curing stage and is further enhanced after a few minutes.
- Air dry the coated surface after application for approximately 4 hours and avoid contact with water.
- Fully-cured coated surface will be able to withstand at least 500 hours of salt spray test.

**Curing Time**
- The applied coating will be ready to be buffed off in 5-10 minutes (Base coat) and 0.5-2 minutes (Top coat).
- The coating will be ready to be layered as follows:
  - 2 hours (5-50°C or 41-122°F); or
  - 1 hour (60°C or 140°F); or
  - 15 minutes (infrared short wave); or
  - 15-20 minutes (infrared medium wave).

**Important Note:** Longest interlayer duration is 12 hours.

- The applied coating will fully cure in 3-5 days.
- During this period the surface should not be washed with any harsh shampoos, all-purpose cleaners or any product containing caustic soda. **This will damage the hydrophobic properties.**
- If necessary, the coated surface may be washed with just normal water during this period.

**Cleaning and Maintenance**
Surfaces coated with ecocoat Kenzo should be cleaned with cleaners in the pH range 3-9. Strong (mineral) acids or alkalis should be avoided and are also unnecessary as neutral cleaners are generally sufficient to clean vehicles coated with ecocoat Kenzo.

**Safety and handling**
For your safety, toxicological data and information on property transportation, storage and use, please read the Material Safety Data Sheet (MSDS) before using any IGL Coatings products. The MSDS is available upon request via email from sales@iglcoatings.com.

**Disposal:**
Dispose product residue in incompletely emptied bottles by bringing it to the municipal collection point for hazardous waste. To safely dispose of the completely emptied bottles, dry the bottles out by exposing the bottles to air. The bottles may be recycled once completely dried.

**Storage**
ecocoat Kenzo is storage-stable for at least 12 months in originally sealed containers. Opened bottles should be used within 6 months.
